## The Company

**Company:** Cantargia AB  
**Position:** Project Manager Preclinical  
**Reporting to:** Vice President, Cancer Research  
**Place of position:** Lund, Sweden

### Cantargia

*"We want to save patients with severe cancer and autoimmune diseases. We focus on immuno-oncology - the strongest growing drug segment - and benefit from well-established antibody technology to design new target drugs.", says CEO Göran Forsberg.*

*Cantargia AB was established in 2009/2010 and is a research-based biotechnology company engaged in research and development of antibody-based therapy against severe diseases. The company is specialized in antibody-based treatment aimed at the target molecule Interleukin-1 Receptor Accessory Protein ("IL1RAP"), which has the potential to be used against several different forms of cancer as well as for autoimmune and inflammatory diseases.*

*Cantargia's vision is to develop and safeguard a novel generation of drugs targeting IL1RAP, making the cancer treatments of tomorrow more effective. Our vision also includes the development of new drug candidates to treat autoimmune/inflammatory diseases. A new project started in 2017 with the aim of developing a new product candidate for the treatment of this type of diseases.*

*Cancer is one of the most common causes of death and accounts for about 20 percent of deaths in the western world. Globally, more than 14 million people are diagnosed with cancer annually and more than 8 million are losing their lives through cancer-related diseases. Despite significant advances in treatment and diagnostics, there is a great need for new treatment methods.*

*The original discovery made by the research team behind Cantargia was that the specific target molecule, IL1RAP, was found on cancer cells from patients with leukemia but not on normal stem cells in the bone marrow. In subsequent research Cantargia has shown that IL1RAP is also expressed on cancer cells in a large number of cancer diseases. In its most advanced project, Cantargia is developing the CAN04 antibody, which is double-acting. This means that it fights cancer both by activating the immune system and by blocking signals that drive tumour growth. During the initial development, Cantargia has chosen to focus on non-small cell lung cancer and pancreatic cancer and the clinical evaluation started in 2017.*

*Cantargia is listed on Nasdaq Stockholm First North since 2015 and today the company consists of 5 people, a number of consultants and partners. Cantargia is located at Medicon Village in Lund. For further information about Cantargia, see the company's website, [www.cantargia.com](http://www.cantargia.com).*

## The role as Project Manager Preclinical

We are looking for a Project Manager and scientific expert with understanding of drug development. You must have knowledge and experience from preclinical work in immunology and/or oncology, and knowledge in immuno-oncology is an advantage. You will work with our CAN04 project, where we use IL1RAP as a cancer targeting molecule, but also with CANxx that focuses on the development of medicines for inflammatory or autoimmune diseases.

You will run, implement and further develop new and existing projects according to Cantargia's strategy. You will lead the implementation of scientific activities within each individual project. You will cooperate with and report to the company's VP Cancer Research.

You should plan, initiate and monitor experiments, analyse data and draw conclusions. The role includes to procure services from CROs and coordinate the work with the CROs and other involved. The work involves many contacts both internally and externally, including international CROs/collaborators/research groups, which imposes high demands on communication skills and diplomatic ability.

You have a strong driving force with the ability to take your own initiatives. As the company is small, you must have a "can do" attitude and not be afraid to "roll up your sleeves". While you are independent, you are also a proactive team player who likes to have a coordinating and project-leading role.

### Key responsibilities

- Responsible for updating project plans, such as project goals, timelines, budget, resources, etc.
- Present project status including risk management, budget, resources, etc. to project teams
- Coordinate planning and implementation of preclinical studies in accordance with current regulations
- Write/coordinate study protocols and reports
- Responsible for procurement and contacts with CROs/consultants
- Maintain knowledge of regulations and standards for preclinical research as well as responsibility for compliance
- Keep overall updated within relevant immunology/oncology activities globally
- Attend conferences and present research results

## Required Qualifications and Skills

- PhD in Science
- Experience of biotech/pharmaceutical companies or academic postdoc experience
- Experience of preclinical research
- Knowledge in immunology and/or oncology
- Experience of project management
- Selection and contracting of subcontractors/CRO
- Good knowledge in Swedish and English, both in speech and in writing
- Experience of Microsoft Office

## Professional and Personal Competences

- Applies and shares specialised and detailed technical expertise. Strong analytical ability.
- Strong ability to organise, plan and implement activities according to set goals, and capability to run several activities simultaneously
- Creates good relationships and networks with stakeholders at different levels, demonstrating interest and understanding for other people
- Takes own initiatives, works independently, makes quick and clear decisions
- Shows quick understanding of new information and collects comprehensive information to support decision making
- Adapts to changing conditions and accepts new ideas and initiatives
- Works productively in a high-pressure environment and balances the demands of work and personal life. Has a positive attitude towards work.

## Other

The role is located at the office in Lund and involves some travel to meetings with researchers, CROs and congresses, both inside and outside Sweden. Suitable place of residence is Lund and surroundings.

## Opportunities with the role

Cantargia aims to develop drugs that can become an important part of the future's cancer treatment as well as in autoimmune/inflammatory diseases. You will be able to work in a small entrepreneurial pharmaceutical company, in the forefront of immuno-oncology, with research that can make a big difference for patients with e.g. non-small cell lung cancer and pancreatic cancer. Cantargia has several exciting projects in progress and you will have a large international network.
